

JAEDON CHIN

Houston, TX | jaechin9@gmail.com | linkedin.com/in/jaedonchin | github.com/JaeChin | jaedonchin.dev
U.S. Citizen | CompTIA Security+ Certified

EDUCATION

Bachelor of Business Administration, Management Information Systems

May 2026

Texas Southern University, Jesse H. Jones School of Business | Houston, TX

2x President's List | 3x Dean's List | Title III Recognition | Soft Skills Cert — Destined for Success Worldwide | 1st Place, NBA Tech Challenge

TECHNICAL SKILLS

Security & Networking: Cisco Firepower (firewall/IPS), Catalyst 9200/8200, Meraki MS130, VLAN segmentation, VPN, Wireshark, endpoint protection, malware defense, Windows/Linux hardening, Cloudflare Zero Trust, WireGuard

Cloud & Infrastructure: Docker/Compose, Linux (Ubuntu), VPS deployment, Cloudflare DNS/Tunnels, Traefik, AWS fundamentals, RBAC, least-privilege access, zero-trust architecture

Automation & Development: Python, JavaScript/TypeScript, Bash, n8n workflow automation, Git/GitHub, Next.js, PostgreSQL, Supabase, Row-Level Security, REST APIs, Playwright

Frameworks & Concepts: NIST CSF, MITRE ATT&CK, risk assessment, SIEM concepts, identity & access management, security documentation, incident response, compliance (NIST, ISO)

PROFESSIONAL EXPERIENCE

Cybersecurity Infrastructure Support Technician

Apr 2025 – Present

Texas Southern University — Cyber Lab, Jesse H. Jones School of Business

Houston, TX

- Built the university's first cybersecurity lab from the ground up: deployed Cisco Catalyst 9200/8200 switches, Meraki MS130 cloud-managed switches, Firepower 1000 firewalls, and a UCS C220 rack server
- Designed VLAN segmentation to isolate student training traffic from production networks; configured firewall rules and intrusion prevention policies on Cisco Firepower
- Hardened endpoints across Windows and Linux systems; created network diagrams, configuration documentation, and a knowledge-transfer guide for operational continuity
- Provided direct technical support to students and faculty, translating complex security configurations into clear, actionable guidance

IT Infrastructure Technician — UPS Systems

Aug 2025 – Nov 2025

JosephOne Technologies / Clear Creek ISD

Houston, TX

- Installed and configured 600+ enterprise UPS units across a K-12 district, enabling centralized monitoring and power redundancy for critical IT infrastructure
- Performed asset documentation, compliance tracking, and troubleshooting of power distribution and network connectivity issues across multiple campuses

Project Intern — National Electrification Project

Jun 2022 – Aug 2022

The World Bank Group

Abuja, Nigeria

- Supported IT infrastructure planning and secure database management for a national solar electrification initiative serving 5,000+ households

TECHNICAL PROJECTS

Jett — Local-First AI Voice Assistant | Python, Docker, WireGuard, Cloudflare Zero Trust, Ollama, n8n, Next.js

2025 – Present

- Built a privacy-focused voice assistant on a custom server (RTX 3070, 32GB RAM) processing commands on-device via GPU-accelerated speech-to-text and a locally-hosted LLM with ~3s latency; hybrid architecture routes complex queries to cloud APIs, cutting costs ~60%
- Implemented defense-in-depth: Docker hardening (non-root, dropped capabilities, read-only FS), allowlist API wrapper for AI-controlled operations, immutable audit logging, and WireGuard-encrypted communication to VPS behind Cloudflare Zero Trust
- Built a Next.js monitoring dashboard tracking system health and resource utilization across local and cloud infrastructure

R-Value CRM — Secure Business Application | Next.js, TypeScript, PostgreSQL, Supabase RLS, Playwright

Dec 2025 – Jan 2026

- Developed a production CRM with role-based authentication, row-level security in PostgreSQL, least-privilege access patterns, and parameterized queries to prevent SQL injection
- Built automated test suites in Playwright to validate security controls and application behavior across user roles

Production VPS Infrastructure | Docker, Traefik, Cloudflare Tunnels, Ubuntu Server

2025 – Present

- Self-hosted a containerized platform with automated SSL, reverse proxy routing, container isolation, and zero-trust access via Cloudflare Tunnels and DNS-level filtering
